## RD QA Life Cycle

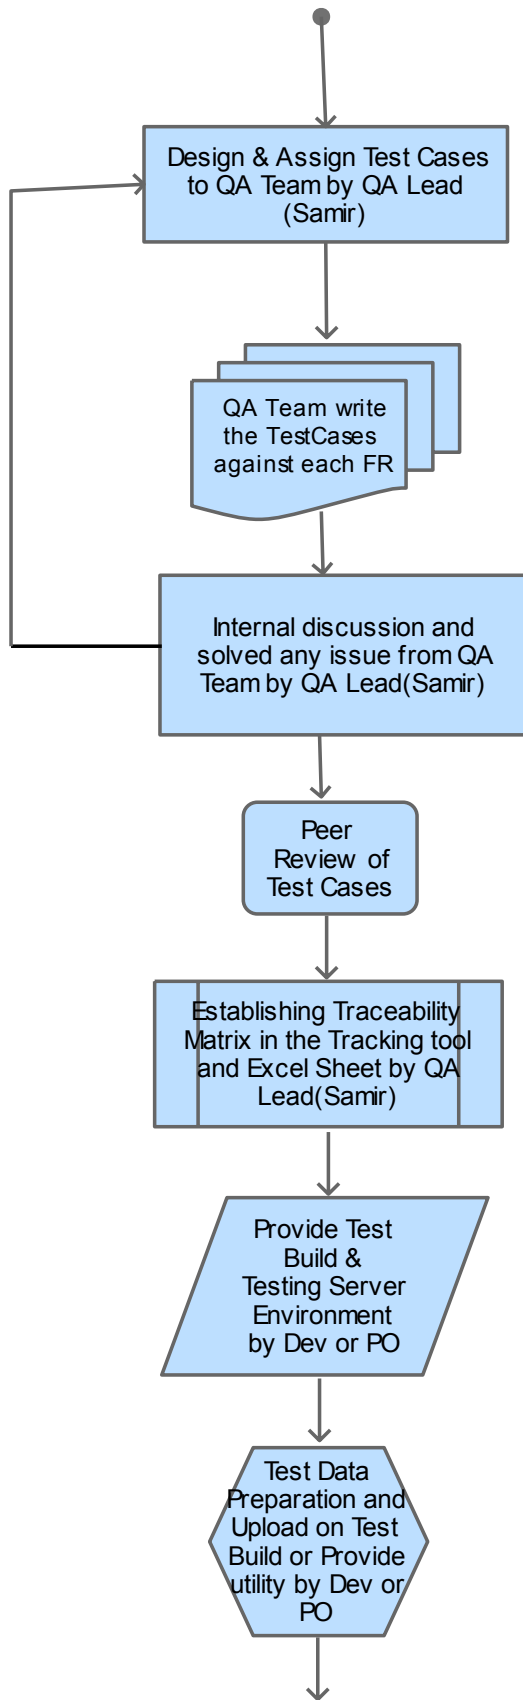

### RD QA Testing Life Cycle

#### Entry Criteria & Assumptions

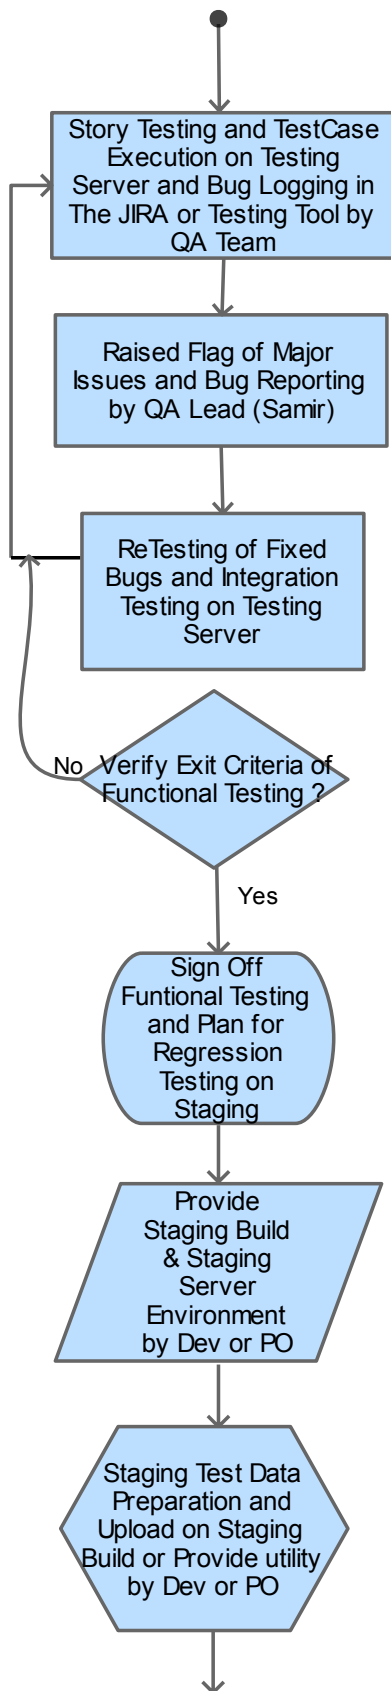

- 1 Walkthrough the Project Plan and End to End Development scope and share Test Estimation if any.
- 2 Walkthrough final and approved Product Functional Flow documents, Wireframe, Designs with detail user scenarios.
- 3 Provide validation documents at field level. Walk-Through the product Business Flow at each module level.
- 4 Baseline and updated versions of each document should be properly managed.
- 5 Log the changes and reflect the final changes in the documents and walkthrough each changes in details with QA Team.
- 6 All the final project artifacts should be available centrally (Functional docs, Wireframe, html design etc.)
- 7 Test Data and different Test Environment gets available to QA Team.

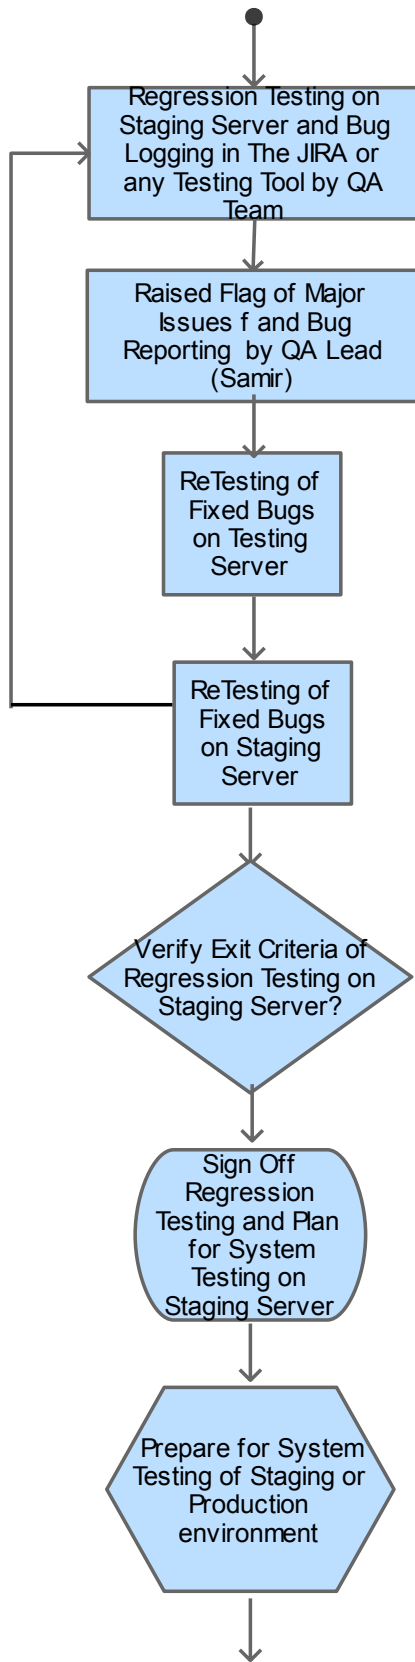

## TestCases & Test Env

# Functional Testing

# Regression Testing

# Compatibility & System Testing
